Method Summary

All MethodsStatic MethodsConcrete Methods

Modifier and Type	Method and Description
static java.lang.Appendable	append (java.lang.Appendable buffer, java.lang.String strToAppend) <u>Appends a string to an appendable buffer</u> created by newStringBuilder() 追加字符串到 “ 一个可追加的缓冲区 ”
static int	compareTo (java.lang.String str1, java.lang.String str2) 按字典序比较 “ 两个字符串 ” <u>Compares two strings lexicographically.</u>
static int	compareToIgnoreCase (java.lang.String str1, java.lang.String str2) Compares two strings lexicographically, ignoring case differences.
static java.lang.String	concat (java.lang.String str1, java.lang.String str2) 将 “ 指定的两个字符串 ” 连接在一起 <u>Concatenates the specified strings together.</u>
static boolean	endsWith (java.lang.String s, java.lang.String end)
static int	indexOf (java.lang.String str1, java.lang.String str2)

static int	<code>lastIndexOf</code> (java.lang.String str1, java.lang.String str2)
static int	<code>length</code> (java.lang.Appendable buffer) Checks the length of an appendable buffer created by <code>newStringBuilder()</code>
static int	<code>length</code> (java.lang.String str) <u>Returns the length of the given string.</u> 返回“给定字符串的长度”
static boolean	<code>matches</code> (java.util.regex.Pattern regex, java.lang.String input) Matches the given (precompiled) regular expression and attempts to match the given input against it.
static boolean 编译“给定的正则表达式”， 并尝试匹配给定的输入串	<code>matches</code> (java.lang.String regex, java.lang.String input) <u>Compiles the given regular expression and attempts to match the given input</u> against it.
static java.lang.Appendable	<code>newStringBuilder</code> () <u>Safely creates a new instance of an appendable string buffer</u> The buffer will <u>not be thread safe</u> .
static java.lang.Appendable	<code>newStringBuilder</code> (boolean threadSafe) Safely creates a new instance of an appendable string buffer
static java.util.regex.Pattern	<code>pattern</code> (java.lang.String regex) This is synonym for "regex".
static java.util.regex.Pattern	<code>pattern</code> (java.lang.String regex, int flags) This is synonym for "regex".
static java.util.regex.Pattern	<code>regex</code> (java.lang.String regex) <u>Compiles the given regular expression into a pattern.</u>
static java.util.regex.Pattern	<code>regex</code> (java.lang.String regex, int flags) Compiles the given regular expression into a pattern with the given flags.
static boolean	<code>startsWith</code> (java.lang.String s, java.lang.String start)
static java.lang.String str(Object obj) Returns a string representation of the object.	<code>str</code> (boolean b) <u>Returns a String object</u> representing the specified boolean. 返回表示“给定对象”的字符串
static java.lang.String	<code>str</code> (char c) Returns a String object representing the specified char.
static java.lang.String	<code>str</code> (double d) Returns a string representation of the double argument.
