Annotation Type OnProbe

```
@Retention(value=RUNTIME)
 @Target(value=METHOD)
public @interface OnProbe
```
" BTrace "

This annotation is used to specify a BTrace probe point in an abstract fashion instead of specifying the class and the method names. This abstract namespace and (local) name are mapped to one or more concrete probe points by the BTrace agent at runtime.

Required Element Summary

Required Elements	
Modifier and Type	**Required Element and Description**
java.lang.String	**name** Name within the namespace.
java.lang.String	**namespace** Namespace for this abstract (a.k.a logical) probe point.

Element Detail

namespace

```
public abstract java.lang.String namespace
```

Namespace for this abstract (a.k.a logical) probe point. Namespace follows java package name conventions.

name

```
public abstract java.lang.String name
```

Name within the namespace. Identifies a probe uniquely within the namespace.
